

## **Be a sharp edge against the "Novel Coronavirus epidemic" and hold the safety bottom line**

In the Lunar New Year of 2020, the Novel Coronavirus epidemic occurred suddenly. In this battle without smoke, the professionalism and responsibility of the majority of cadres and employees on the special equipment front effectively ensured the safety of the operation of special equipment for the epidemic prevention and control, and fully supported the resumption of production and production of the enterprise, provides a powerful back-up guarantee for the epidemic prevention, control and blocking the epidemic.

### **Take advantage of technology to solve practical difficulties for enterprises**

Elevators, boilers, pressure vessels etc. are necessary facilities to ensure hospitals and centralized quarantine. The technical inspection of special equipment safety by inspection agencies is an important measure to ensure the safe operation of special equipment.

12 division including the Boiler Division, Pressure Vessel Division, Pressure Pipeline Division, Gas Equipment Division, Amusement Device Division, Elevator Division, Hazardous Chemical Substance Equipment Division of CSEI, a total of more than 120 inspection personnel were sent to 22 provinces (autonomous regions and municipalities) in Qinghai, Zhejiang, Guangdong, Guangxi, and Shanghai to carry out inspection and testing, play an active role in ensuring the safe operation of special equipment for epidemic prevention and control.

### **Actively provide front services to support enterprises to resume production**

Recently, the Pressure Vessels Division of CSEI undertook the inspection of 51 pressure vessels and 1324 pipelines in the Dongying Hualian Petrochemical Factory. The Factory is one of the designated company by Hekou District of Dongying City to resume production. In accordance with relevant policies, Dongying Hualian Petrochemical Factory is exempted from 50% of the charges for this special equipment inspection, with of the amount of RMB 1.04 million, realizing the mode of reducing cost but not quality, combining inspection and epidemic prevention, and carrying out the work in an orderly manner.

### **Strengthen the investigation of hidden dangers and ensure the safety of work resumption**

Due to the long-term production shutdown, the equipment is also in a state of shutdown. Before restoring production, it is necessary to carry out a comprehensive inspection and maintenance of the equipment to avoid safety risks caused by malfunction of the equipment. Each region can conduct free online training for the special equipment operators in batches according to their own circumstances and the needs, and enterprises are urged to carry out investigations on potential safety hazards of special equipment risk sources.

Special equipment is related to the health and safety of the human life. The cadres and employees on the special equipment front bravely face the challenge and go all out to ensure the technical safety of the special equipment required for enterprises to resume production and ensure people's livelihood, made due contributions to the prevention and control of the epidemic.
